

DIRECTIONS FOR USING **EVERSHARP PENCILS**

READ CAREFULLY.

Even though you have used an Eversharp Pencil before.

Now is the time to take a few minutes to get acquainted with your Eversharp. The better you know how to operate it, the more pleasure you will get from using it. It is necessary to know only a few simple operations.

1. *To write.* Propel lead from point by turning cap to right, clockwise.

2. *To re-load.* Lead is exhausted when turning cap to right fails to propel more lead. Inner mechanism has been released and can be pulled straight out without unscrewing (Fig. 2).

3. *To get new lead from magazine.* With mechanism withdrawn and held upright unscrew cap two full turns, until leads lean out of the "V" shaped opening in the side of mechanism when pencil is held as shown (Fig. 3).

On all short models, the brass eraser cap must be unscrewed to get the lead.

4. *To insert new lead push plunger all the way down, while holding mec-*

hanism upright and insert new lead in tapered end (Fig. 4). Slip barrel down over mechanism and turn cap to right until lead feeds out. (Fig. 2).

The distance mechanism will pull out always indicates length of unused lead in tip.

5. *Eraser is under cap.* To use it pull cap straight off, don't unscrew it (Fig. 5).

6. *To replace Eraser.* Unscrew brass bushing containing eraser and punch old eraser out through threaded end with pencil tip (Fig. 6).

7. *To fill lead magazine.* Unscrew eraser bushing and insert leads in magazine. (Fig. 7).

Note. Always use Eversharp Red Top Leads which are sold only in Red Top Metal tubes. These leads contain all the qualities so necessary to mechanical pencil leads—accurate and uniform in dimensions; strong and straight, which reduces breakage.

8. A genuine Eversharp can be distinguished by the small grooves cut in the lead by the rifling in the hardened steel tip (Fig. 8). The riflings hold the lead firm and keep it from turning to the side worn flat in writing.
