Superchrome Ink

For your new Parker "21"

Available in 5 super-brilliant colors: Red, Blue, Green, Blue-Black, Black. Superchrome was created through a wholly new formula by Parker scientists. This ink brings to owners of Parker "21" pens these exclusive benefits:

Super-brilliance . . . super-permanence and "dry-writing".

Parker Superchrome is up to 60% more brilliant than ordinary inks. Actually dries as it writes.

Filling Instructions
for Your
NEW

Parker "21"

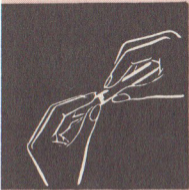

with the sensational

OCTANIUM

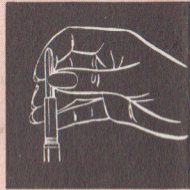

POINT

to fill your Parker "21"
with dry-writing **Superchrome Ink**

(the Parker "21" also uses any quality fountain pen ink)

- 1 Unscrew the pen barrel at clutch ring.
- 2 Immerse the point in ink; press ribbed bar 3 times.
- 3 After filling, remove excess ink by holding cleansing tissue to point and feeder for two seconds.

your New Parker "21"

has the new miracle metal point of **OCTANIUM**

Nothing like it ever before . . . a new smooth, tireless writing point made of OCTANIUM. This remarkable discovery is a combination of eight different metals, selected for specific qualities, and uniquely blended for the softest, smoothest writing ever.

other outstanding features in New Parker "21"

New Ink Flow Control—prevents fading and line variation by metering ink in smooth, even flow.

New-Type Concealed Filler—provides pen with full supply of ink

when ribbed bar is pressed 3 times.

Visible Ink Supply—translucent reservoir shows amount of ink in pen.

Hooded Point—keeps point moist for instant starting.
